OIL AND GAS INFORMATION MANAGEMENT

For the Oil and Gas Industry, leading-edge information management is the keystone to success. Capturing, organizing, analyzing and sharing business and technical data in a timely and cost-effective manner is absolutely critical to exploration, scientific research, project development, environmental compliance and many other industry disciplines.

GRM can save you money and improve your efficiencies when it comes to:

- Managing sector geophysical and technical data.

- Organizing, consolidating and leveraging Mergers & Acquisitions information assets.

- Sharing information across departments and units.

- Making information quickly available to remote field operations.

- Analyzing seismic data, technical reports and maps.

- Recovering information quickly from manmade or natural disasters.

- Integrating geophysical data and business data.

- Capturing information from any point of entry.

- Automating workflow.

- Staying in compliance with all relevant regulations.

With over 25 years of experience, a presence in 13 major U.S. markets including Houston, and a comprehensive suite of innovative services, we, at GRM, are well equipped to handle your Oil and Gas company needs. By seamlessly integrating specific services into a custom Blended Solution package, we are able to optimize security, accessibility, productivity and cost savings while providing the capacity to accommodate and fuel significant future growth.

KEEP YOUR INFORMATION PIPELINE FLOWING

GRM provides a complete and vital information pipeline capable of energizing your entire operations.

At the core of this platform is the GRM Online Record Center, a Cloud-based digital repository that supports information Capture, Management, Compliance and Workflow Automation. The Online Record Center helps cut costs, expand productivity, reduce risk and keep information flowing across departments and units by:

- Integrating technical information with business data such as emails, contracts,legal documents, commercial information, etc.

- Enabling information to be accessed remotely, which helps eliminate the isolation felt by employees in the field.

- Supporting project roadmaps and process analytics.

- Allowing keywords to be searched across multiple fields.

- Accommodating customization to meet specific operational, technical and budgetary needs.

- Permitting multiple levels of access, editing and approval.

- Delivering user-friendliness with minimal training required.

- Functioning seamlessly with many popular software programs and systems.

- Supporting PDFs.

- Providing complete chain-of-custody tracking (both paper and digital documents).

GRM also provides:

- Offsite physical document storage.

- Scanning/imaging and conversion of paper to digital.

- Free remote information management software.

- Data protection.

- Disaster recovery preparedness.

- GRMpedia, a low cost, online knowledge base that keeps you informed of Oil & Gas compliance issues 24/7.

- Certified destruction (via paper shredding and eWaste destruction).

- Information management consulting and more.
