

RADIOLOGY IMAGING AND WORKFLOW BACK UP/SUPPORT

The GRM Online Record Center is a flexible, turnkey digital repository that supports and supplements the workflow and billing functionality of an RIS (Radiology Information System), a PAC (picture archiving and communication system) and EMRs (Electronic Medical Records systems).

Through its ability to bridge all of these systems, the Online Record Center can achieve imaging information integration across a medical enterprise.

For medical organizations with multiple locations and personnel working remotely, who wish to back up clinical data and billing information stored in an on-premises EMR such as OnBase, the Online Record Center offers many advantages. Subscription-based affordability (requiring no upfront expenditures), quick deployment and intuitive, user-friendly navigation, make the system a reliable alternative for storing/accessing information and tracking clinical metrics to satisfy compliance.

This can prove invaluable when facing the potential downtime of disruptions and failures commonly associated with EMR transitions and roll outs.

Compatible imaging technologies include:

- X-ray radiography
- Ultrasound
- Computed Tomography (CT)
- Nuclear Medicine
- Positron Emission Tomography (PET)
- Magnetic Resonance Imaging (MRI)

By automating processes, reducing manual error, mitigating downtime, supporting tools such as eForms and communicating with disparate systems, the GRM Online Record Center facilitates:

- Workflow Coordination
- Patient/Resource Management
- Billing and Reimbursements
- Clinical Data Analytics
- Interventional Radiology
- HL7 Clinical Result Transfers and Reporting
- Radiology Worklists
- (CPOE) Computerized Physician Order Entry
- CPT and ICD-10 Coding

As a full service, HIM provider, GRM also provides:

- On Demand Imaging, Indexing and Conversion
- Offsite Physical Document Storage
- Medical Release of Information
- Immediate insurance company access to patient data through an innovative Insurance Portal
- Full healthcare regulatory compliance with HIPAA, ACA and other mandates
- Disaster Recovery
- Data Protection
- Certified Destruction
- A Paper to Digital Blended Solution (simultaneously maintaining both inventories)
