GRM CHART ACQUISITION PLATFORM

IMPROVING THE EFFICIENCY
OF CLAIMS PROCESSING

The GRM Chart Acquisition Platform automates and accelerates the capture of large volumes of patient chart data while also providing healthcare companies and partners with important business insights into claims processing. This degree of automation and improved business-metric visibility, is capable of drastically improving the profitability of an organization by reducing the prevalence of write-offs due to filing denials, decreasing the amount of patient encounters that cannot be billed and eliminating the expense of reprocessing claims.

PAIN-FREE IMPLEMENTATION

The web-based, modular build of our Chart Acquisition Platform allows for a simple installation process with no time-consuming or costly configurations.

ADVANCED DATA CAPTURE

We have the technology to consume structured and unstructured chart data from multiple sources in a variety of ways. Upon capture, the system then intelligently leverages this data by feeding it into automated workflows that yield complete patient charts.

HIGHLY-ADAPTABLE

Given our platform's flexible structure, workflows can be built and customized over time by clients to address new processing demands. And, staff can easily create custom reports related to claims processing.

VALUABLE ANALYTICS

Administrators can gain immediate business insight into claims department performance—leveraging advanced analytics to identify areas for improvement and optimization.

UNMATCHED SCALABILITY

Due to our platform's unique architecture, massive amounts of documents can be processed accurately and quickly in an environment that is almost infinitely scalable to the growing needs of a hospital or health system.

ROBUST SECURITY

All patient data is end-to-end encrypted. And our robust security model strictly manages role-based access.

With our Chart Acquisition Platform in place, patient charts can be quickly captured and completed so claims processing can progress efficiently. Organizations can save serious time and money by implementing this GRM solution today.
