

# HEALTHCARE INFORMATION MANAGEMENT

## DELIVERING HIGH-VALUE BUSINESS SOLUTIONS

GRM's robust, cloud-based content management platform is composed of five powerful components that work together to seamlessly deliver proven solutions for healthcare. Available in one flexible platform, these marketplace-tested, HIPAA-compliant solutions are quickly and easily implemented – and all support the delivery of enhanced patient care.

Our healthcare solutions are designed to address the most complex information management challenges facing health systems by delivering better processes, improved access to information and higher quality data. And, in addition to supporting the delivery of enhanced patient care, these solutions deliver more efficient processes and the associated dramatic financial benefits.

## LEGACY DATA ARCHIVE & EMR SYSTEM DECOMMISSION

GRM's unique LDA solution extracts and migrates clinical data from EMRs into one secure platform while preserving the quality of the data at its highest level and enabling a complete EMR system decommission. This solution provides significant cost savings related to licensing and maintenance fees, especially for healthcare organizations that have accumulated multiple EMR systems through acquisitions.

## CHART ACQUISITION PLATFORM

Our Chart Acquisition Platform has multiple applications for patient records management. These applications employ a unique combination of automated document analysis and streamlined workflows that yield substantial benefits, including ensuring continued access during EMR downtime, creating a Longitudinal Patient Record that provides a holistic view of a patient's health, and delivering advanced revenue cycle management.

## ACCOUNTS RECEIVABLE WORK DOWN

Our AR Work Down solution for healthcare merges billing and account information from multiple AR systems into one powerful and easy-to-use platform, providing comprehensive access to information so that you can process more accounts in less time. In addition to increasing efficiency and productivity, it also protects your organization from the risk of system failure or sunseting – common problems with older AR systems.

## HR CONTENT MANAGEMENT

We seamlessly integrate with your existing HCM/HRIS to give you full control of your HR content in a single digital environment, enabling you to efficiently manage a high volume of employee information. Rather than logging into multiple systems, you can manage all of your HR content in a single interface – including structured and unstructured data (e.g., employee paper forms and records, HR content from legacy systems and business applications).

## WORKFLOW AUTOMATION

This dynamic solution applies advanced technology to business operations, streamlining processes and increasing overall efficiency by integrating content with employees and business processes across the entire organization. Our advanced Workflow Automation technology saves time and reduces the risk of human error by defining clear processes, removing inconsistencies and using automation to drive adherence to the set procedures.

## PATHOLOGY SOLUTIONS

Our Pathology Solutions for the digital management of assets and processes are designed to save time while improving patient care. Built around our cloud-based content services platform, our healthcare information management technology can help your laboratory or healthcare system to save valuable time and reduce errors by implementing secure, automated workflows for lab requisitions, billing and more. And, GRM offers physical storage of blocks and slides in our climate-controlled, state-of-the-art facilities.

## CHART ACQUISITION & VERIFICATION SOLUTION

Our Chart Acquisition & Verification Solution reduces Days Sales Outstanding from weeks to days by automatically identifying Patient Chart Discrepancies and allowing them to be corrected at the beginning of the patient chart acquisition and verification process. This significantly decreases Timely Filing Denials, saving physician services companies and related healthcare organizations tens of millions of dollars each year.
