

CODERCONNECT

CODING WORKFLOW SOLUTION

STREAMLINING THE CODING OF PATIENT RECORDS TO REDUCE UNBILLED ACCOUNTS.

The coding of patient records in preparation for billing has historically been and continues to be a major bottleneck that negatively impacts your DNFB or unbilled account status.

GRM CoderConnect opens up that bottleneck by replacing manual processes with automated processes, consolidating the acquisition of patient records and standardizing coding practices. And importantly, provides you with a simple and clear view of real-time performance and operations along with insights on trends over time.

A Solution That Reduces Unbilled Accounts Due to Coding Backlog

1. Patient records acquired through single portal

2. Business logic auto-distributes records based upon coding specialty

3. ICD-10 codes easily accessed and assigned by Coders

4. Coded records immediately accessible to Charge Entry Team

5. Integration with billing system expedites submission to Payers

Full visibility of process and reporting delivered via management dashboard.

A Single Portal

The CoderConnect solution establishes our cloud-based platform, VisualVault, as the single portal for the consolidated acquisition of medical records.

In addition to the operational benefits of VisualVault serving as a central portal, there are also significant cost savings to be realized as a result of no longer needing to maintain licenses for EHRs and billing systems for every Coder.

Intelligent Distribution of Patient Records

Central to the coding of patient records is the distribution of records by specialty area – so that coders most familiar with an area of medicine can process those records most efficiently. CoderConnect employs business logic that auto-distributes records based upon coding specialty.

Simple & Convenient Format

Employing our intelligent form technology, the CoderConnect solution delivers a simple, common format where diagnostic codes and treatment codes are easily looked up by Coders, assigned and then linked.

Accelerated Billing

By virtue of VisualVault serving as a consolidated online repository for records and the overall coding process, it's accessible in real-time to the Charge Entry team who can proceed with initiating billing without delay. And, processes are further simplified and accelerated with the seamless integration between VisualVault and your billing system.

Visibility & Insights

Data is consolidated in a structured format in a single place and processes are standardized within a digital environment. Beyond the gains in efficiency, this allows for unprecedented visibility into the process, progress, data and trends that define the coding function.
